## MODERNIZING OPERATIONS AND CUSTOMER INTERACTIONS IN THE FINANCIAL SERVICE INDUSTRY

FSI's recent acceleration to the cloud has outpaced any other industry, facing both new opportunities and challenges. Can the right solution provider ensure successful outcomes?

# FSI cloud adoption soars, outpacing other industries in their quest for modernization

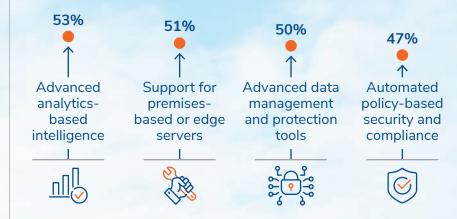

Banks and financial service industry companies (FSIs) are migrating to the cloud at record rates. About half of all FSIs already use public or private cloud services; this is expected to reach 90% by 2023.

#### **USAGE OF CLOUD SERVICES**

Providing value-added services is an important feature of a partnership with a hybrid cloud provider. Over half of financial institutions in 2020 sought help with advanced analytics and cross-infrastructure support.

#### HIGHEST-VALUE FEATURES OF A HYBRID CLOUD PLATFORM

#### CLOUD ADOPTION IS HIGH

Banks and other financial entities are already among the highest users of hybrid cloud, the adoption of which grew an additional 8% in 2020. Multicloud adoption for financial firms soared by 70% in 2020.

#### IS EVERYONE ABOVE AVERAGE?

Eighty-three percent of financial industry IT and business leaders believe they are more digitally advanced than their competitors.

This indicates a level of over-confidence in the industry, underestimation of the competition's capabilities and, potentially, great risk of falling behind.

#### MORE WORKLOADS ARE IN THE CLOUD

The percentage of new workloads being run in the cloud is growing faster for the banking industry than others, expanding 4% more quickly than businesses overall by 2025. The financial sector is already ahead, with over half of new workloads run in the cloud as of 2020, whereas the reverse is true when looking at all industries combined.

#### Migration to cloud complex but necessary for banks and financial services

The speed and agility of the cloud help FSIs recognize increased efficiencies with internal processes and enables them to create innovative and competitive customer experiences. The stay-at-home orders in 2020 that forced both workers and customers into virtual interactions over in-person ones further accelerated banks' digital transformation strategies.

However, banks have unique requirements when compared to many other industries that complicate their ability to pursue the advantages of the cloud:

Highly regulated markets often compel banks to retain some proportion of on-premise data storage and utilization.

Protecting vast quantities of personally identifiable information (PII) makes banks major targets of cybercrime.

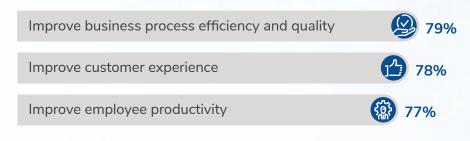

Complex technical knowhow needed to migrate to the cloud lies outside the main core competencies of many banks.

Competitive pressures and technical challenges meant that in 2020, the priorities for banks leaned more toward innovation and data utilization than they did for other industries.

### Internal technical challenges increasingly test the ability of banks to fully leverage technological innovations

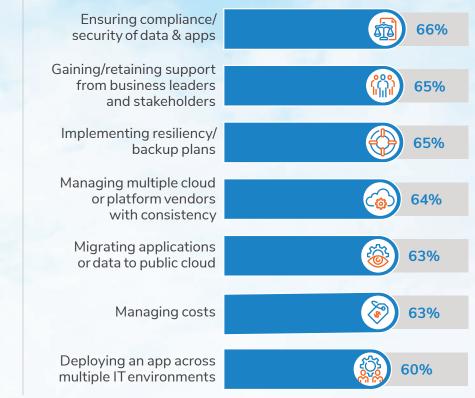

Banks demonstrated strong confidence in the progress made with digital transformation, but this begins to falter when looking at their own capabilities.

#### FINANCIAL FIRMS CITING INSUFFICIENT EXPERTISE AS A SIGNIFICANT HURDLE TO CLOUD IMPLEMENTATION

Banks cite a multitude of challenges with cloud implementation, ranging from security and compliance issues to managing multiple cloud partners.

#### **IMPLEMENTATION CHALLENGES**

#### How to address FSI's reigning cloud challenges

Banks recognize how critical it is to be innovative and keep data secure, but also their technical limitations in meeting these goals. Ninety-two percent of FSIs with cloud services use, or plan to use, third-party cloud experts. Advanced cloud solution providers such as NetApp work with FSIs on their direct needs as well as offer greater organizational visibility through a "single pane of glass" offering.

Data compliance and security are the top concerns for FSI cloud implementation, affecting 66% of businesses. Eighty-nine percent of IT executives in FSI reported an increase in cyberattacks in 2020.\* Regulations continue to tighten their grip.

#### IMPLEMENTATION CHALLENGES OF FSIs

#### LEADING SOLUTION

NetApp Cloud Manager delivers a SaaS-based, single pane of glass control plane, enabling integrated cloud compliance and cloud security solutions to automatically ensure data and apps are safe and compliant. As a result, FSIs can focus more resources on innovation, services and operations. Ensuring optimal data backup and recovery from the cloud is the number one service that FSI businesses seek from a cloud partner. As with security, hyperscalers typically put the onus of data backup and recovery on the client.

#### MOST POPULAR MANAGED/ PROFESSIONAL SERVICES

Planning/implementing backup & recovery procedures	39%
Managing organizational/ cultural change	37%
Optimizing cloud costs	36%
Creating an edge strategy and roadmap	36%
Developing a cloud strategy and roadmap	36%

#### LEADING SOLUTION

FSIs can leverage backup services from their advanced cloud service providers, such as NetApp's Cloud Volumes solutions that work across hyperscalers and workloads. Managing a multi-cloud environment has become critical to FSIs as nearly half (49%) employ multi-cloud services. However, 34% say they have challenges moving to the cloud, and 67% have repatriated workloads back on-premises.

#### FINANCIAL FIRMS USING HYBRID AND MULTI-CLOUD SERVICES

#### LEADING SOLUTION

Leveraging the powerful data management capabilities of NetApp ONTAP®-based solutions, FSI customers can efficiently build and manage a multi-cloud environment either on-prem with AFF, near-prem with NPS and in the cloud with CVO, without the risks of data silos.

#### Steps for smart FSI cloud adoption and business modernization

Systems and information are tough to manage and maintain for any organization. FSIs, in particular, have the additional challenges of being heavily regulated, highly competitive, and major targets for cybersecurity threat actors.

# Data has to be fully<br/>protected yet fully<br/>accessible, wherever<br/>it lives and worksBar<br/>be<br/>suiTo remain competitive<br/>as data and technologyall

STEP 1

as data and technology advance, FSIs must shore up their operations regardless of data infrastructure and utilization, including:

- Hyperscale clouds, on-prem, and hybrid
- At the edge, server, mobile devices
- As back-up or in action.

# Banks and financial institutions are a cornerstone of the national economy; their focus and efforts need to be on providing high-value services with the greatest security and availability. FSI businesses are well-suited to work with partners who understand the market and can provide the right tools for data storage and management. This can help avert costly repatriation caused by the lack of in-house expertise and allow expensive resources on high-value projects that are more in line with a bank's core competencies.

STEP 2

Leverage cloud advantages but avoid the pitfalls

#### STEP 3

#### Leverage a partner to remain competitive in the face of new challenges

Is the organization prepared for the increasing onslaught of data generation and cybersecurity attacks? Can it be certain that all data, apps, and systems will always comply with evolving regulatory demands around the world in near-real-time? Does the current data and security strategy scale easily for growth and expansion? To remain competitive and allow their focus to be on outcomes and innovation, FSIs must work with a cloud partner that provides technology-driven tools to keep roadblocks at bay.

#### FROST 🕉 SULLIVAN

### 

NetApp is a cloud-led, data-centric software company. We help the largest financial services companies—including retail banking, capital markets, hedge funds and insurance—to take advantage of their vast volumes of readily available data to improve business performance and efficiency. Our offering covers the full range of capabilities required to build and manage the unique data fabric, which provides a common framework to simplify the integration and orchestration of data services on-premise and in the cloud. NetApp unlocks the best of both.

#### FROST & SULLIVAN

The Growth Pipeline Company.

Growth is a journey. We are your guide. For over six decades, Frost & Sullivan has provided actionable insights to corporations, governments and investors, resulting in a stream of innovative growth opportunities that allow them to maximize their economic potential, navigate emerging Mega Trends and shape a future based on sustainable growth.

Our Growth Pipeline helps coach leadership teams with actionable intelligence, unparalleled thirdparty recommendations, world-class support, experiential collaboration, innovative go-to-market strategies and proven best practices to help clients reach their growth potential.

Whatever the challenge, Frost & Sullivan has seen it all. Our 1,200 industry experts worldwide have proven experience spanning 35 sectors, 300 markets and countless industries to help you navigate your custom Growth Pipeline.
