

Ransomware Recovery Guarantee

Protect. Restore.

NetApp offers a new guarantee to restore Snapshot data if a ransomware attack occurs.

What is the Ransomware Recovery Guarantee?

- A cost-effective approach to cyber resilience —more protection, more security.
- A highly effective solution to protect production or secondary data from the threat of ransomware attacks.
- Our guarantee: If we can't help you restore your Snapshot data, we'll make it right.
- Available on new purchases of [AFF A-Series](#), [AFF C-Series](#), [ASA](#), and [FAS](#) systems.

Benefits:

Protect

- Prevent data tampering and data loss on primary or secondary storage by deploying a “logical air gap.”
- Meet industry standards for preserving data in an indelible format through secure WORM (write once, read many) file locking with NetApp® SnapLock® Compliance software.
- Lower the cost of data storage by retaining storage efficiencies end to end.

Restore

If we can't help you restore your Snapshot data, we will compensate you.

Are you prepared?

- **96%** of those who paid a ransom did not get **all** their data back
- **One month:** average time to recover from an attack*

Don't just take our word for it

“A 24/7 operation has no capacity reserve. NetApp solutions keep everything going and can recover data fast. That helps us meet delivery dates and strengthens the pharmaceutical supply chain.”

Michael Schachinger
Head of IT, SCHOTT Schweiz AG
