PROBLEM SOLVED

In its own production environment, NetApp reduces its development time by using NetApp® FlexClone® to manage its Oracle databases and enterprise applications.

NetApp Cuts Development Time by Improving Oracle Database and Enterprise App Management

THE BOTTOM LINE: ONTAP/FLEXCLONE

Successful organizations need their developers to be working – not waiting for datasets. FlexClone delivers datasets rapidly and at a fraction of the cost. NetApp uses FlexClone to improve its own Oracle database administration.

HELPS REDUCE REPLICATION STORAGE COSTS BY MORE THAN

80%

CREATE FULL WORKING COPIES OF LARGE DATASETS IN MINUTES AT

10%

OF ORIGINAL SIZE.

NetApp®

> "FlexClone gives developers time to focus on their core jobs, which is to develop. We took off about a week from our development cycle. So that's the big one."

Matt Brown, Executive Program Director, NetApp

KEEP YOUR DEVELOPERS WORKING AND YOUR BUSINESS RUNNING.

For industry-leading organizations, there's no time for downtime. They can't afford for system backups to paralyze operations or enterprise applications. Enter NetApp FlexClone. As part of ONTAP, it's an effective way to create copies of datasets; but compared traditional methods, FlexClone consumes less storage space and system resources.

NetApp uses FlexClone to improve its own Oracle database administration, freeing up development resources.

"FlexClone gives developers time to focus on their core jobs, which is to develop," said Matt Brown, executive program director. "We took off about a week from our development cycle. So that's the big one."

Companies can clone their largest volumes in minutes using substantially less space, cutting storage costs by more than 80%. It's a powerful way of managing applications and databases, as well as reporting, testing, and improving system performance.
